35 centimeters?

Great atmosphere and over 1000 spectators in the steep ranks. Everyone was eagerly awaiting the next figure. The referee positioned the balls, but he placed ball III 35.5 cm away from its correct position. None of the 10 players and hardly any of the spectators noticed the mistake. When the first player was already beginning to play, a voice high up in the ranks rang out: "Referee, the red ball ... !" General indignation followed. The spectators looked angrily at the supposed troublemaker and hissed in his direction, and the referee also looked angrily at the interrupter.

Being right and getting right are two different things.

Also a method against miscue

Yannick Despierre was a real eccentric. After several miscues, he angrily changed his cue butt - to everyone's astonishment - and he scored again. It wasn't the leather, more likely the head.
